DRILLING APPROVED AT GASCOYNE LITHIUM PROJECT

Segue Resources Limited (**Segue** or the **Company**) is pleased to announce that all approvals have been received to undertake a maiden drilling programme at the Reid Well lithium-caesium-tantalum (**LCT**) Prospect at the 100% owned Gascoyne Lithium Project in Western Australia (**Figure 2**).

The Company will complete a 2,500m RC drill programme to test the lateral extent, depth and orientation of the 1.8km x 1.2km, high grade Reid Well LCT prospect (**Figure 3**). Drilling is planned to commence in August 2017 and will take 3-4 weeks to complete. Assay results are expected to be received by the end of September 2017.

Segue has undertaken a significant soil sampling survey at Reid Well which identified several mineralised LCT pegmatites. A follow up rock chip programme collected a total of 68 samples with peak values of 3.77% Li₂O, 2.22% Li₂O and 1.89% Li₂O. In addition, 34 rock chips returned values greater than 100ppm Ta₂O₅ including 669ppm Ta₂O₅ and 636ppm Ta₂O₅.

Competent Persons Statement

The information in this report that relates to Exploration Results is based on information compiled by Mr Dean Tuck who is a Member of the Australian Institute of Geoscientists. Mr Tuck has more than five years' experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the "Australasian Code for Reporting of Exploration Results, Minerals Resources and Ore Reserves". Mr Tuck consents to the inclusion in the report of the matters based on his information in the form and context in which it appears.
